

Are you getting the most out of your SharePoint Infrastructure?

Can it cope with your future business requirements?

Do you suffer from service or performance issues?

Microsoft SharePoint offers a platform with immense possibilities for organisations. Its ease of use and simplicity has encouraged rapid adoption; however this widespread adoption can lead to best practices being overlooked.

Can you answer the following questions?

- Have you reviewed the SharePoint and Windows event logs and addressed any recurring errors?
- Have you actually tested the backup process through doing a test restore (SharePoint backups can be unreliable!)
- Have you looked at the underlying SQL database in terms of patching, security and performance?
- Are you contemplating an infrastructure or operating system upgrade?
- Are you sure your use of SharePoint is compliant with your licence agreement?
- Are the Search and Indexing features configured correctly to give best results?
- Should you and can you migrate to the latest version (2010) and what implications will this have for you?
- Has a recent security audit highlighted deficiencies?
- Have you experienced poor response times?

Our SharePoint Healthcheck will answer all of these questions and provide you with a detailed assessment and recommendations as to how you can address any issues and improve your overall return on investment from SharePoint.

Our Healthcheck comprises a detailed investigation of all aspects of your SharePoint infrastructure combined with detailed recommendations on what actions need to be taken immediately and in the future to meet your ongoing requirements.

Key features include:

- Infrastructure reviewed by Ireland's #1 Microsoft Development Team (all Microsoft Certified Professionals)
- Findings customised to your individual business requirements
- Detailed Report on all findings and implications for your business

Be one of the first to learn how SharePoint 2010 can help your business! As leading experts in the field, we have been working closely with Microsoft as part of the exclusive Early Adoption Programme for SharePoint 2010. As the only Irish partner on this programme, we have a unique insight into the business opportunities and possibilities 2010 offers.
