

The background of the slide features a collage of food images. At the top left, there's a tray of golden-brown pretzels with large, dark, textured swirls. Next to them are several round bread rolls, some with a light dusting of flour or sugar. In the center, a long loaf of bread with a distinct ribbed texture sits next to a sandwich wrapped in clear plastic. The bottom right shows a tray of sandwiches, with one clearly labeled "Tuna". The overall theme is fresh, baked goods and prepared meals.

Supporting
Musgrave Group
in the Modernisation of its
Core Business Application

VERSION 1

Version 1 Supports Musgrave Group in the Modernisation of its Core Business Application to a Cloud-Based Digitised System

Musgrave Group is Ireland's leading food retail and wholesale supplier to retail, foodservice and SMEs. The retailers' brands are market leaders and as a business, Musgrave feeds one in three people in Ireland. Musgrave is the largest private sector employer in Ireland and employs over 35,000 people across Ireland and Spain in its stores, offices and warehouses.

“ We have heard and seen Version 1’s impact at Musgrave Group and our business will benefit significantly from the newly digitised Musgrave Processing Hub, a solution that is critical to the efficient running of our organisation. The modernisation of legacy systems to the Musgrave Processing Hub, a Cloud-based digitised system, will deliver wide-ranging benefits for Musgrave Retail Partners. These benefits range from self-serve functionality and mobile-compatibility to meet user needs, to data insights on store buying trends, product ranges and pricing to drive management decisions and growth in the highly competitive retail sector.

- Gerard O’Flynn, Musgrave Group

Long-term Customer Relationship

Version 1 has worked with Musgrave for over a decade and sustains this positive partnership by utilising Version 1’s Customer Success model which uses a collaborative approach to deliver real and tangible business benefits, improvements and efficiencies for the customer. Version 1 works collaboratively with multiple stakeholder groups across the Musgrave

organisation to support the customer's objectives. The Version 1 teams operate as an extension of Musgrave's own internal teams, facilitated by positive and productive working relationships based on shared values and trust.

Delivery of the Musgrave Processing Hub (MPH)

Version 1 worked with Musgrave to replace aging legacy core business systems with a Cloud-based digitised Processing Hub. The technology stack for the solution developed is Microsoft and it is based entirely in the Cloud (Microsoft Azure).

Moving this key infrastructure over to Azure was a crucial step for the Musgrave business in terms of business agility and stakeholder usability. While the legacy systems were robust and steady, due to the aging underlying technology it wasn't agile enough to meet the demands of the organisation and couldn't meet the type of expectations that modern users would have in terms of features, functionality and usability such as mobile enablement.

It was imperative for Version 1 to develop a solution based on current and future requirements when delivering the Cloud-based Processing Hub as opposed to simply 'lifting and shifting' the legacy system which was based on past requirements 'as is'. This approach ensures that the system can be a platform for the future that will deliver with pace and be responsive to future needs of the business.

Continuous Improvement of the Musgrave Processing Hub (MPH)

Phase 1 of Musgrave Processing Hub went live in the Spring of 2019 and Phase 1 enhancements will run to the end of the year. It was critical for Version 1 to ensure business continuity and minimise disruption for the business stakeholders throughout the delivery of the first phase of the system and demonstrate business value early to the customer. Version 1 continues to work in collaboration with Musgrave to plan Phase 2 and 3 which will include further enhancements and potential opportunities for improvements in efficiency.

Real Difference Delivered - Musgrave Processing Hub (MPH)

The new cloud-based Musgrave Processing Hub enables the business to:

- 1.** Transact key information quickly – such as invoices from multiple sources
- 2.** Support the finance and retail staff in searching for and transacting against key data in the system
- 3.** Capture and extract data to develop data insights to drive decision-making
- 4.** Plan and develop new functionality in a secure, robust, scalable and modular manner
