

# VERSION 1

## Smart ERP – Smart User Engagement

Speed and flexibility have become imperative for business success. However, many organisations feel weighed down by enterprise technologies that are inflexible and increasingly obsolete. With Smart ERP, Version 1's aim is to enable our customers to become more agile, to be quick. Agile in responding to users' increasing demands for improved quality and smooth user experiences. Quick in turnaround, adoption and speed of service.

Smart ERP – Smart User Engagement for E-Business Suite, is a solution that transforms our customers' E-Business Suite applications with contemporary user engagement and high-quality user experiences. Depending on the applications or processes that you seek to streamline, our Cloud-based framework integrates your preferred solutions such as Amazon Alexa, Facebook Messenger, and Teams with existing E-Business Suite applications.

Harness our innovation to help your stakeholders in their daily tasks, from approving expenses to checking annual leave balances.

Android and iOS Native Applications

Microsoft Teams

Chatbot and Q&A

PowerApps

Alexa

Google Home

## Features

Meet your users where they work through multiple digital channels

Upgrades your traditional ERP interface to a powerful, modern interface for a greater user experience

Reimagined workflows for ERP through digital channels

Microsoft Cloud-based services such as Q&A Maker are integrated, to provide NLP (Natural Language Processing) capabilities

Public Cloud integration capabilities –introduce your ERP systems to AWS and Azure

Support for both on-premise and Public-Cloud deployment

Support for a wide range of digital channels such as Alexa, Google Assistant and Microsoft Teams

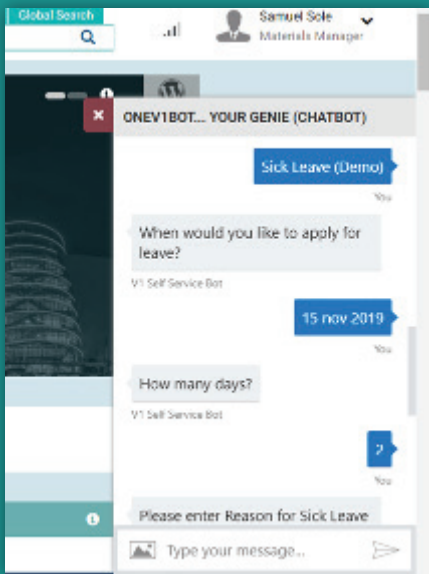

All GDPR regulations and standards are met

# Example Use Case

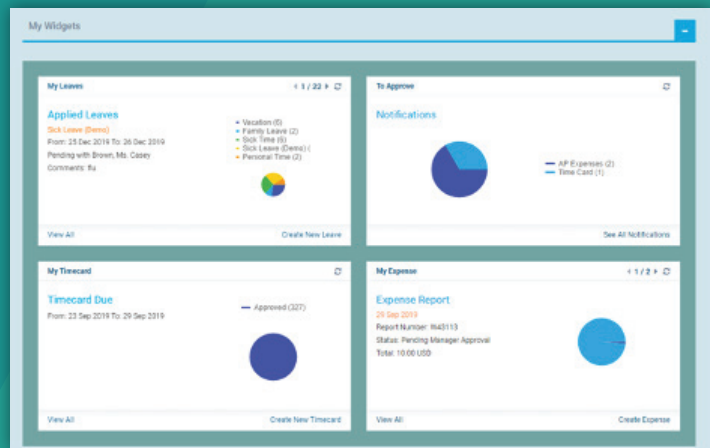

Employees continue to travel for business, whether it be meeting at other company locations or strengthening relationships with customers. When travelling, you may feel restricted as to what you can do, due to limited access to your work systems. Imagine travelling through an airport and checking your phone to see that one of your employees has applied for sick leave through a notification. You simply click the notification and approve directly and instantly through your phone, completely skipping the need to log into an ERP system. The employee is granted sick leave, and you continue with your journey.

**Smart ERP makes this a reality, allowing you to meet your employees where they are.**

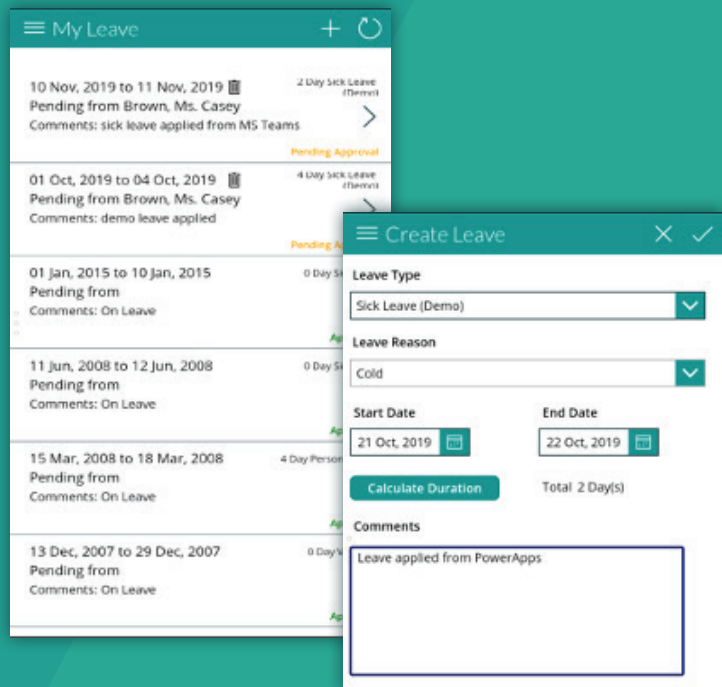

## Chatbot Integration

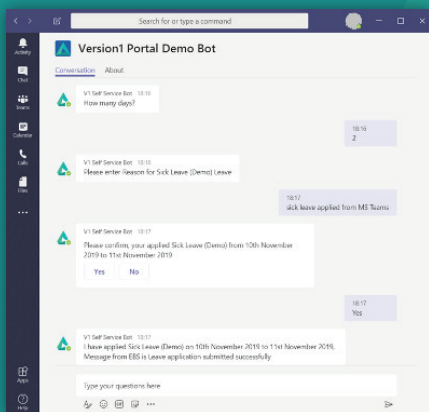

## Fully Integrated with ERP

## PowerApps

## Chatbot In Teams
