

A Day in the Life of a

Java Developer

Ninad Nimkhedkar from our Bangalore Digital and Cloud team discusses his role.

How did you get into the role of a Java Developer?

I joined Version 1 at the end of 2019 and have been loving my time here so far. Prior to joining I had gained 4 years of experience through internships and impactful projects I undertook in my first job. I have my Bachelors Degree in Engineering and a Masters in Mechatronics too, so I love all things IT and technology.

Describe your average day as Java Developer at Version 1?

My day starts with checking emails to ensure there are no important overnight developments related to our project. We then have stand up calls, updates with the Scrum Master and I also attend a total of 3 or 4 fixed meetings throughout the week solving issues raised by the customers. The rest of my week is usually coding using IntelliJ IDE. In my free time I mostly try to learn new technologies by going through tutorials and video lectures, or I also recently have undertaken developing extra skills Python in Anaconda with jupyter IDE and Visual Studio code for Angular.

What are the best AND most challenging parts of your job?

The best part of my job is being given responsibility within the team; this really helps to boost my confidence and will allow me to work on challenging work in the future. In all honesty, I haven't yet faced any major challenges because my team is so helpful with any queries or questions I have.

What advice would you give to someone looking to become a Java Dev at Version 1?

It really depends on the individual interests of every applicant and which domain they want to grow their career in technology-wise. Across the board though, a basic knowledge and clear understanding of widely-used technologies is important; understanding structure and OOP concepts will help, plus you can start basic coding with Eclipse IDE to kickstart a successful career in the field.

Describe your job in 5 words or less.

Varied, interesting, challenging, enjoyable, responsibility.
