Classification: Controlled. Copyright ©2025 Version 1. All rights reserved.

**Version 1 has one of the most extensive and capable Global Oracle Practices with a full range of Advisory, Development and Managed Services capabilities.**

**Version 1 has OCI Solutions are available for:**

- Oracle Cloud
- Oracle Data Technologies
- Oracle AI
- Oracle Analytics

# ANALYTICS: Analytics Healthcheck Assessment

Version 1's Oracle Analytics Healthcheck is designed to maximise the return you get from your Oracle Analytics Investment.

We will assess your system across four key dimensions and provide actionable advice to allow you to improve the value you get from your data.

## Data

- Data Sources
- Data Breadth
- Data Delivery and Quality
- Data Governance

## Users

- User Skills
- User Sentiment
- User Pain Points

## Impact

- Analytics Usage Trends
- User Adoption
- Business Coverage
- Business Impact

## Technology

- Data and Analytics Maturity Level
- Technical Debt
- License Subscriptions Use and Coverage

Assessments can be tailored to ensure you get exactly the right insight to allow you the confidence to build an Analytics roadmap that will continue to drive costs down and value up. Such case studies usually identify both quick wins, more strategic options, and potential risks currently with the solution, or on the horizon.

**Pricing: fixed price engagement at reduced rates**

## WHY ORACLE ANALYTICS?

### Data Visualisation

Highly effective and dynamic visualisations help users to learn the key and most important insights

### Data Management

Provide business users and analysts the freedom of working with any data in a self-service mode.

### Machine Learning

Tools to generate their own machine learning models using a variety of supervised and unsupervised machine learning algorithms from Oracle Analytics.

## Maximise your Investment

Many businesses have invested considerably in their enterprise analytics & reporting on-premises Oracle Business Intelligence solutions.

These frequently complex environments have supported the business well, but they have also started to hinder the ability to adopt innovations, reduce costs and seize new opportunities.

By moving Oracle Business Intelligence to Oracle Analytics, your organisation will gain all of the new features of a modern, augmented business analytics platform while preserving years of investments.

Whether you want to migrate to the cloud or upgrade on-premises, the path is basically, the same, and Version 1 can help.

## Benefits

Fast Review of Analytics Position

Create Roadmap Improve Planning

Identify Innovation Opportunities

Reduce Risk

Reduce TCO

# ANALYTICS: JDE Advanced Analytics

Many customers continue to enjoy the benefits of JDE ERP Software. Version 1 has built a packaged accelerator to allow these customers to add Advanced Analytics using OAC and Autonomous Data Warehouse in an efficient and accelerated way.

The Version 1 JDE Advanced Analytics Accelerator is a pre-built Warehouse, and Integration Data Pipelines that accelerates the deployment of Advanced Analytics and reduces the cost. Included are KPIs and aggregate tables, that mean gaining insight and creating business-specific reports is easy.

## Integration Layer

**ODI on Oracle Cloud with pre-built integration components and data pipelines**

- Prebuilt data pipelines
- Change data capture
- Data transformation
- Performance accelerators

## Data Layer

**Autonomous Data Warehouse, with prebuilt, zoned Data warehouse**

- Prebuilt 3-Zone Data Warehouse
- Performance accelerators
- Data change tracking

## Analytics Layer

**Oracle Analytics Cloud, with prebuilt logical layer with KPIs**

- World class Analytics capability with Visualiser, Dashboards, Publisher Reporting and AI Capability

## WHY ORACLE ANALYTICS?

### Data Visualisation

Highly effective and dynamic visualisations help users to learn the key and most important insights

### Data Management

Provide business users and analysts the freedom of working with any data in a self-service mode.

### Machine Learning

Tools to generate their own machine learning models using a variety of supervised and unsupervised machine learning algorithms from Oracle Analytics.

Unlike other Packaged Analytics Products, the Version 1 JDE Advanced Analytics Solution does not try and force your business to try and fit the Analytics, but makes it faster to get Analytics that fits your business.

We can offer a range of deployment options, including Fixed Price Deployment, and there are no ongoing charges - the solution is entirely your own.

The solution is a risk-free pathway to Oracle's best Analytics technology and AI.

## Benefits

Rapid Path to  
Advanced Analytics

Gain New  
Insights

Intelligent Data  
Search

AI Enabled and  
Accelerating

Full Enterprise  
Reporting Solution

# Our dedicated Oracle AI Labs....

A solution service for our Oracle Enterprise Applications customers, to educate and explore AI-related technologies, and to help establish them as leaders in business innovation and value through AI.

## Oracle Innovation Award Winners - EMEA

"The prestigious SaaS Partner Award 2023 underscores Version 1's outstanding expertise in Oracle Cloud services and further cements its position as **a leading Oracle partner in Europe.**"

OCI Solutions and Capabilities

# Top to Bottom Expertise on the Oracle AI Stack

## Core AI Services

Digital Assistant

**Oracle Digital Assistant:** Build conversational AI experiences for customers and employees using voice and text interactions

Language

**OCI Language:** Extract insights from text data through natural language processing capabilities like sentiment analysis and entity recognition.

Speech

**OCI Speech:** Convert audio into text and vice versa, enabling speech-to-text and text-to-speech applications.

Vision

**OCI Vision:** Analyze images and videos to extract information and insights using computer vision techniques

Document Understanding

**OCI Document Understanding:** Extract structured data from documents, automating processes like invoice processing and contract analysis.

## Top 6 barriers to AI success

### 1. Uncertain Use Case Value

**Proven Use Cases:** Co-create and validate key Oracle use cases swiftly.

---

### 2. Technical Transition to Production

**Production Expertise:** Extensive portfolio of production-ready solutions, accelerators and landing zones for Oracle.

---

### 3. Cost and Value Unpredictability

**Cost Optimisation:** Best-fit models and continuous cost optimisation with ModelOps.

---

### 4. Risk and Privacy Management

**Risk Management:** Proficiency in Open and Closed source AI, including SLMs for secure implementations.

---

### 5. Regulatory Compliance

**Regulatory Expertise:** Lead in Responsible AI compliance and policy guidance.

---

### 6. Data Quality and Availability

**Data Excellence:** Advanced integration, cleansing, and AI tagging solutions.

## Our approach to overcoming barriers

# Building AI powered solutions using Oracle's native AI services

A solution service for our Oracle Enterprise Applications customers, to educate and explore AI technologies and solutions, and to help establish them as leaders in business innovation and value through AI.

## AI-powered business growth

We use our AI expertise alongside Oracle's embedded AI to elevate business processes for stronger results and growth.

## Maximising Oracle's AI potential

We unlock the full potential of Oracle's AI-embedded solutions, ensuring customers harness the power of AI for operational excellence and competitive advantage.

### Version 1's Oracle AI Labs

Large Language Models

Natural Language Processing

Small Language Models

Accessibility, Transparency and Accountability

Classification, Clustering and Forecasting

Image Recognition, Classification and Segmentation

Recommendation Systems and Link Prediction

AI Transformation

Cloud FinOps and GreenOps

Next Gen Dev

# Unlock Oracle modernisation and support challenges using our custom Gen-AI tool

## 1. Code

### Read Oracle Code Base

Interpret codebases for enhanced readability without manual effort

## 2. Extraction

### Extract segments

Analyse files in a repository to extract specific code segments

## 3. Translation

### AI Translation

Leverage latest AI models to translate codebases into relevant documentation for support

## 4. Documentation

### Generate Documentation

Automate the process of creating technical and business documentation

## 5. Insights

### Query Insights

Analyse codebases, providing tailored responses and visual data

## Languages currently supported:

COBOL

# Decipher

## AI powered code analysis and documentation

Our Cloud agnostic AI solution that automates the generation of functional and technical documentation to decode Oracle codebases and enable efficient, cost-effective application modernisation and support.

# Evolution of AI in Fusion Applications

## Classical AI

- Uses your data
- Delivers predictions, categories, recommendations
- Detects anomalies and compares information

Pre-2023

## Generative AI Agents

- RAG grounds LLMs in your business data
- Delivers personalised content, summaries, and suggestions

2024-25

2024

## Generative AI

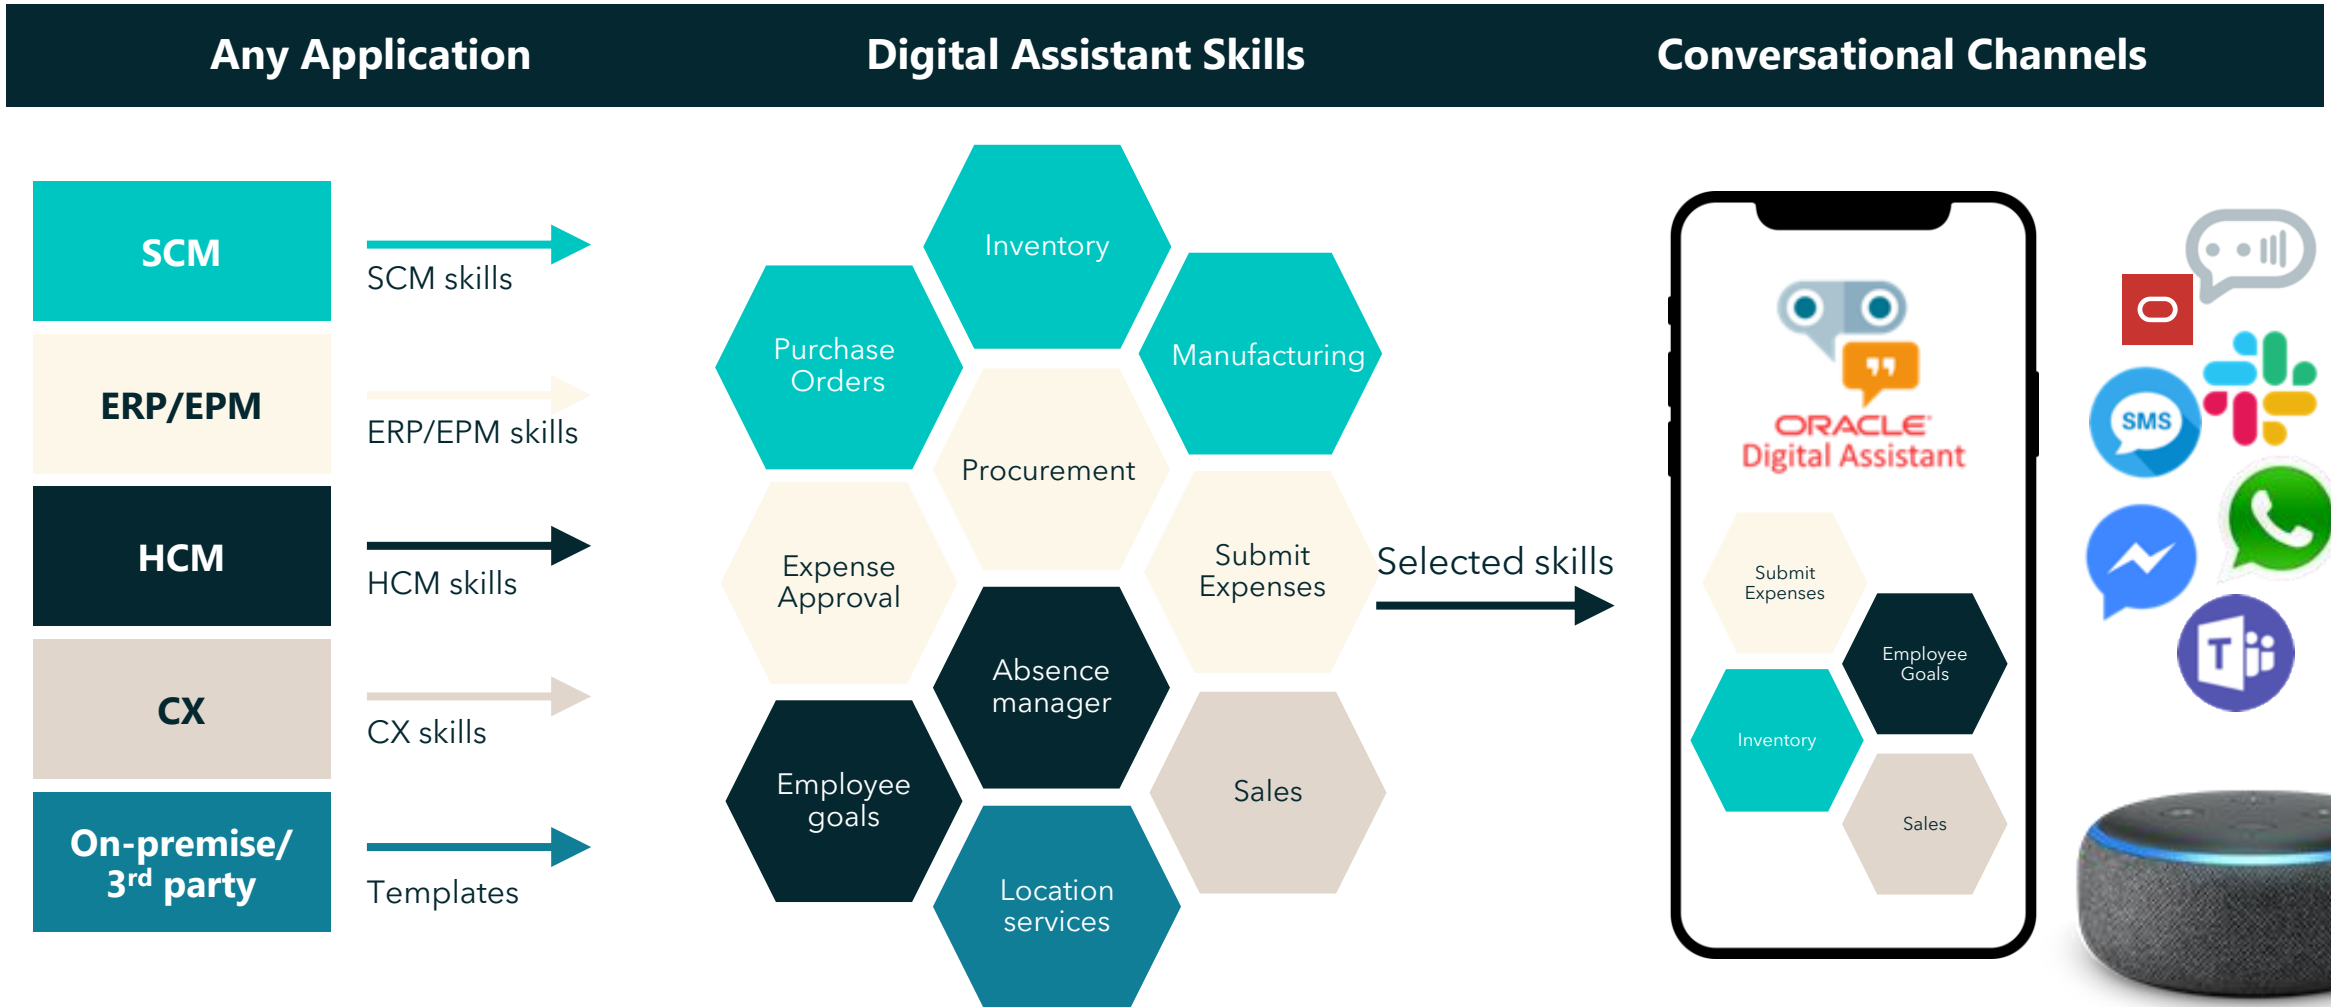

- Takes advantage of LLMs
- Creates new content
- Summarises information
- Makes recommendations

2025-26

## Multi-Step Agents

- Help with research and reasoning
- Orchestrate and execute tasks and workflows
- Strategic, high-business-value recommendations

# Oracle Digital Assistant Skills and channels

# Cloudbridge : Successful organizations need data fluidity. Cloudbridge delivers:

A web tool that empowers Business users to manage and integrate data and metadata

Virtually eliminates dependency on IT to run those processes

Utilizes pre-built connectors and commands for a zero-coding experience

Is certified by Oracle and deployed from the Oracle Cloud Marketplace

# What is Cloudbridge?

**A platform for orchestrating processes and data across the customer's application estate**

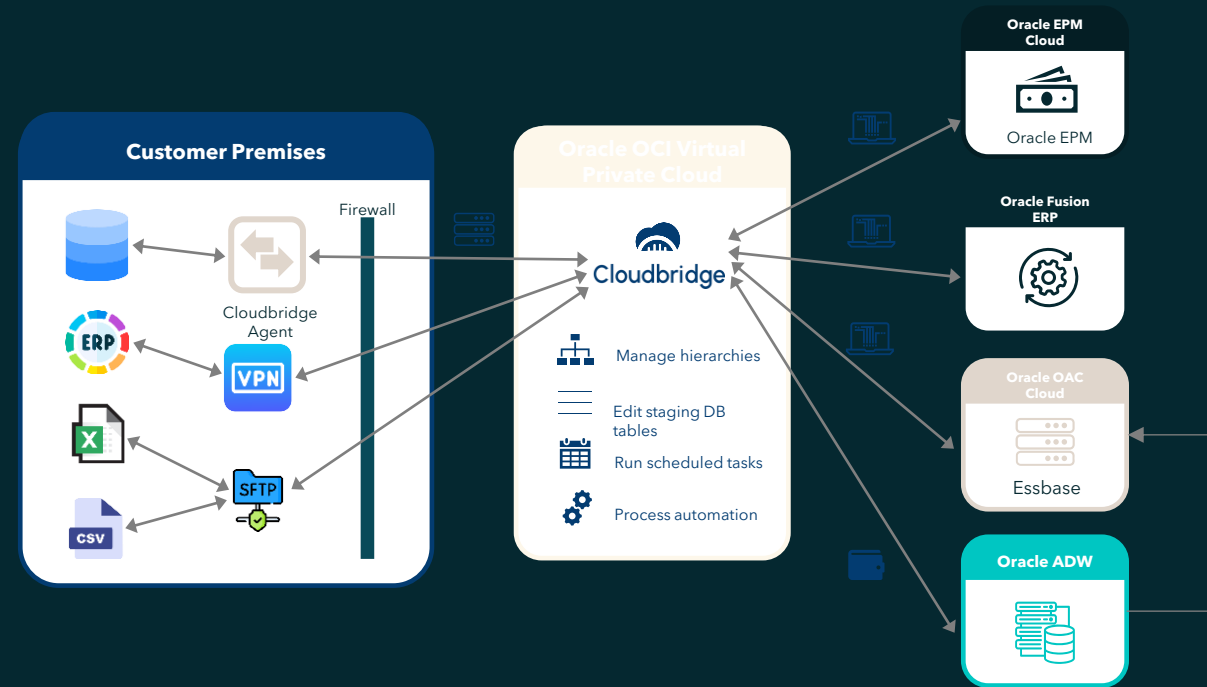

**Used to model, automate and monitor processes that integrate multiple systems and applications in the cloud or on-premises**

**Used to combine process and data automation via data connectors and data manipulation commands**

**A comprehensive solution – uniquely combining process automation, data integration and master data management**

**A machine learning engine analyses performance data to warn users of potential problems before they happen**

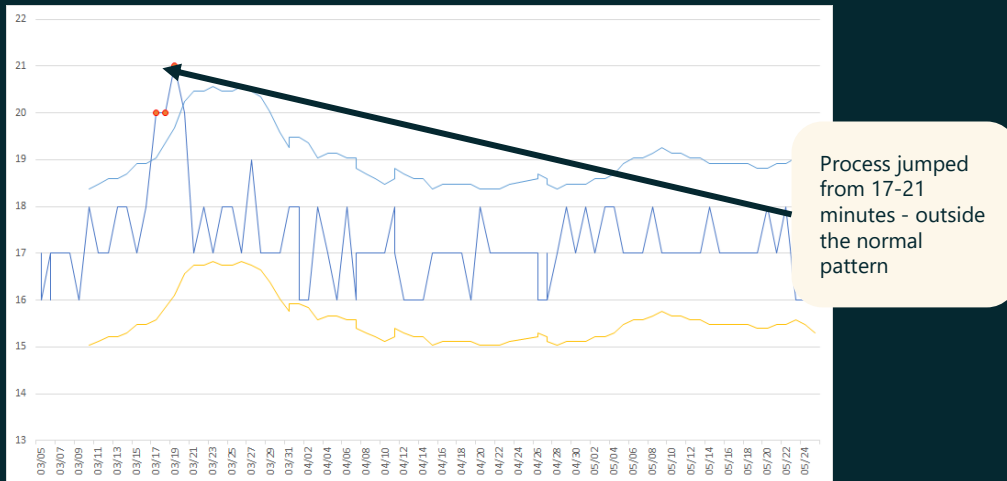

**A powerful orchestration platform contained within a user-friendly UI designed for Business and Finance teams**

# Epiphany Engine

- What does it do?
- Use machine learning to monitor and predict system performance
- Alert when problems are forecast - before errors occur
- Compare current and previous performance and alert if processes run unexpectedly quickly or slowly
- Optionally halt processes when an alert is raised
- Factors in the impact of growing data volumes

- Why is this important?
- Systems more often fail due to bad data or user errors rather than system errors
- The Epiphany Engine can detect data issues before they cause failures
- Early identification makes correction and mitigation easier
- Reduce business impact by identifying and fixing issues before they cause failures

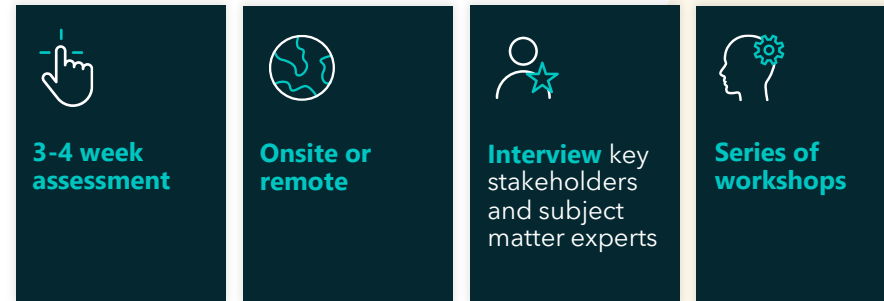

# Migrate Your Workloads to Oracle Cloud

## Infrastructure/Platform Architecture

- Compute/storage footprint
- No. of environments
- Networking and integrations (DNS, SMTP, AD, file shares, A/V, external access...)
- Pre-existing cloud design principles
- Security
- HA and disaster recovery capabilities
- RTO/RPO targets
- Application version
- Database specifications and version

## Program Overview

OS versions and any dependencies

Rational for specific architectural design

Architecture design schematic

List of servers, with specification

List of integration types in use:

- Web services
- DB links
- File system input/output
- FTP/SFTP
- Other
