Integration – VDAIP

Version 1 Data and AI Integration Platform

VERSION 1

VDAIP : Successful organisations need data fluidity. VDAIP delivers:

A web tool that empowers Business users to manage and integrate data and metadata

Virtually eliminates dependency on IT to run those processes

Utilizes pre-built connectors and commands for a zero-coding experience

Is certified by Oracle and deployed from the Oracle Cloud Marketplace

Classification: Controlled. Copyright ©2026 Version 1. All rights reserved.

VERSION 1

What is the VDAIP OCI Platform?

A OCI platform for orchestrating processes and data across the customer's application estate

Used to model, automate and monitor processes that integrate multiple systems and applications in the cloud or on-premises

Used to combine process and data automation via data connectors and data manipulation commands

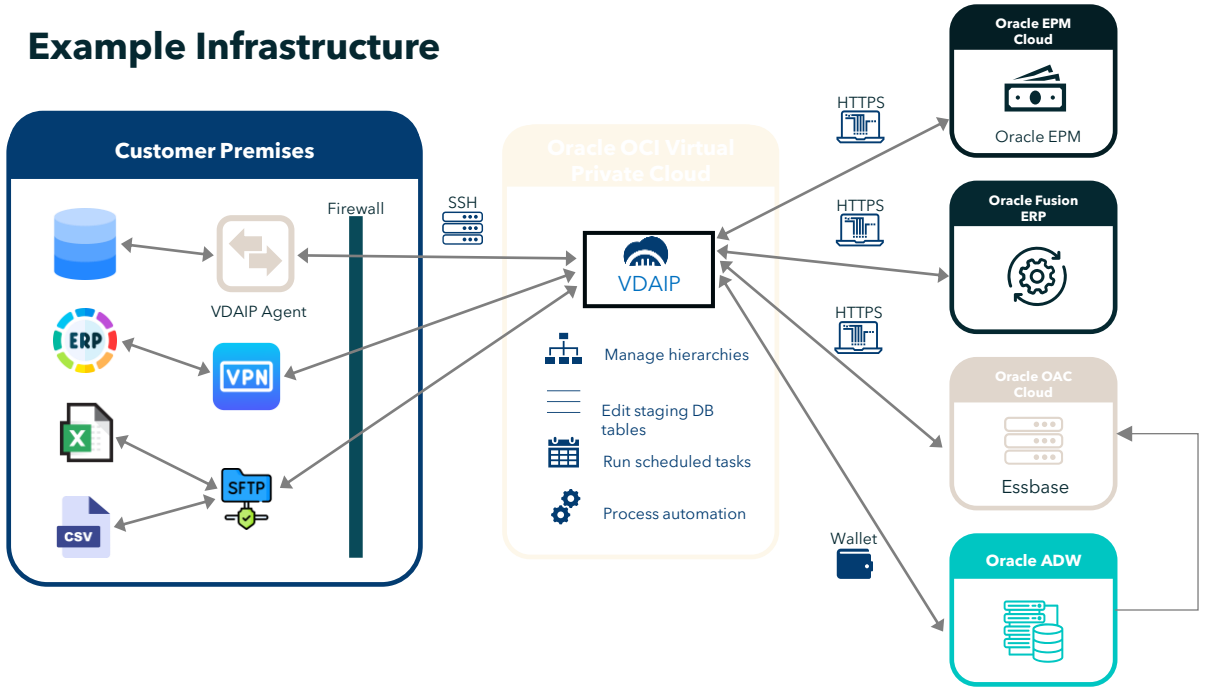

A comprehensive solution – uniquely combining process automation, data integration and master data management

A machine learning engine analyses performance data to warn users of potential problems before they happen

A powerful orchestration platform contained within a user-friendly UI designed for Business and Finance teams

VERSION 1

Epiphany Engine

- What does it do?
- Use machine learning to monitor and predict system performance
- Alert when problems are forecast - before errors occur
- Compare current and previous performance and alert if processes run unexpectedly quickly or slowly
- Optionally halt processes when an alert is raised
- Factors in the impact of growing data volumes

- Why is this important?
- Systems more often fail due to bad data or user errors rather than system errors
- The Epiphany Engine can detect data issues before they cause failures
- Early identification makes correction and mitigation easier
- Reduce business impact by identifying and fixing issues before they cause failures

Classification: Controlled. Copyright ©2026 Version 1. All rights reserved.

VERSION 1

VDAIP Integration Offering

Scope of activity

- Assess your application estate and priority business processes.
- Map data sources and integration points to VDAIP connectors.
- Configure and test selected workflows in VDAIP.
- Provide post-cutover hypercare and transition to business-as-usual support.

Benefits

- Enable business users to manage data and metadata integration.
- Reduce reliance on IT through pre-built OCI connectors and no-code commands.
- Use machine learning to flag unusual process timings and potential issues.
- Identify problems early to reduce business disruption.

Delivery & Duration

- Work with IT, Business and Finance teams to prioritise workflows.
- Assess, design, configure and test workflows before go-live.
- Confirm delivery duration after fast-start **3-day** assessment, based on integration and estate complexity.
